

VIDEX PRODUCT BUILDER

VERSION 8.4

So much for so little

First released in 2000 the Videx Product builder has transformed the way in which designers, specifiers and installers approach the design of door entry and access control products.

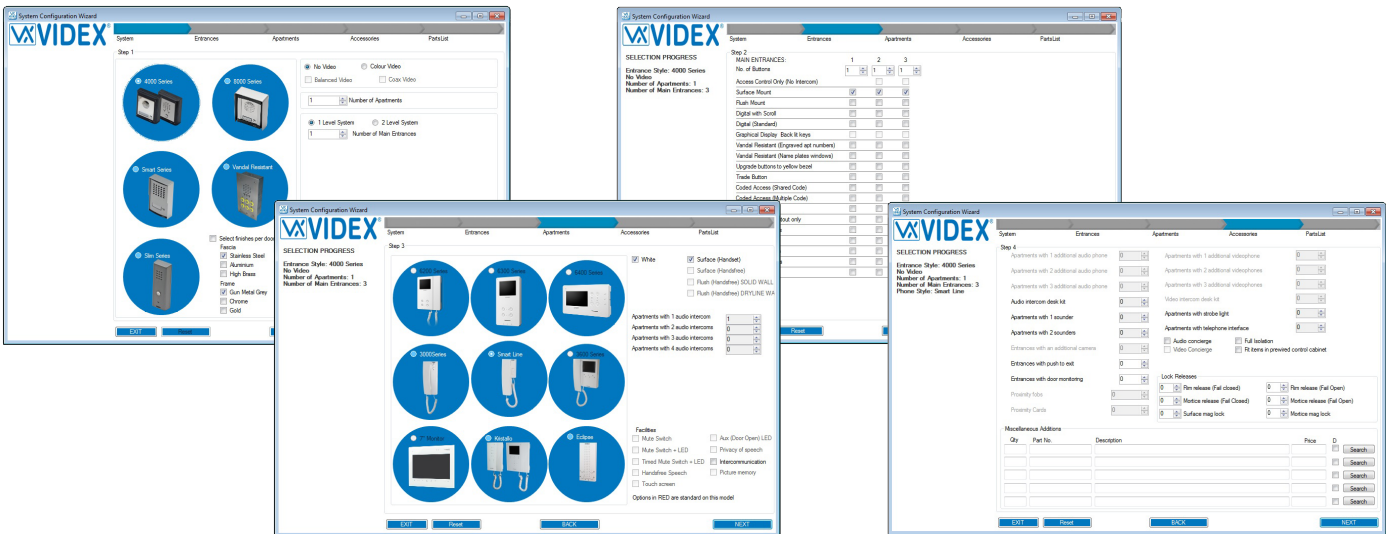

Since its first release, the Product Builder CD has been continually improved, with ease of operation being one of the main areas of attention in its continued development.

The latest version (8.4) has been enhanced even further and contains all the latest kits, 4000 series, 8000 Series, VR4K, VR120, GSM, VX2300 (*two wire video*) and the VX2200 with its expanded capabilities. In addition to the full VIDEX product range, the CD also contains all installation manuals, datasheets and product literature.

Where a system is being designed from a single door to a multiple door installation, the layout and sizes of all door panels audio, video and functional can be displayed, with engraving to buttons and user instructions added. Modular panels can be rearranged on the screen to allow unlimited combinations and layouts.

A full parts list of all components will be produced including prices, these can be adjusted by the user, to show discounts and mark ups. When complete the CD will if required produce a block diagram of the complete system, identifying cable size and number of cores to each component.
